

# Response Characteristics of a Large-Area Ion Chamber with Various Radiotherapy Beams

**Makan Farrokhkish, B.Sc.**

Department of Radiation Physics, Radiation Medicine Program

Princess Margaret Cancer Centre , Toronto

# An integral quality monitoring system for real-time verification of intensity modulated radiation therapy.

Islam MK<sup>1</sup>, Norrlinger BD, Smale JR, Heaton RK, Galbraith D, Fan C, Jaffray DA.

## Real-time Monitoring of an IMRT Field

$$S_M \propto \text{Dose} \cdot \text{Area}$$

Photon Source

Collimating elements

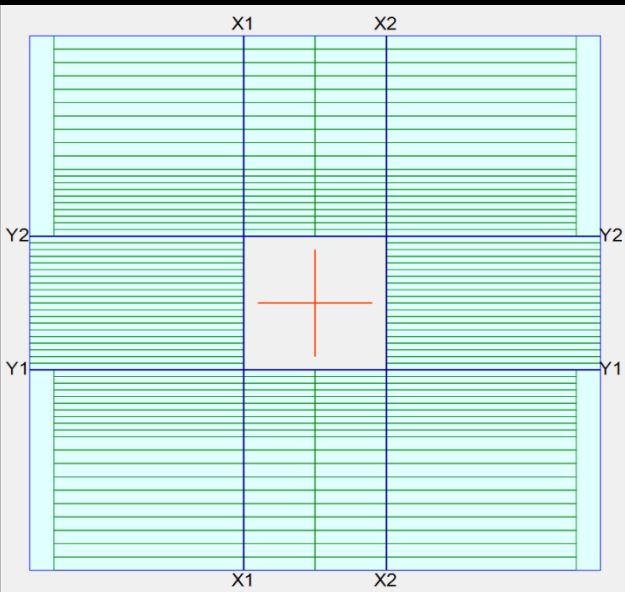

Large Ion Chamber

# Factors that influence IQM signals

- Linac Head Structure
- Beam Energy
- Beam Calibration

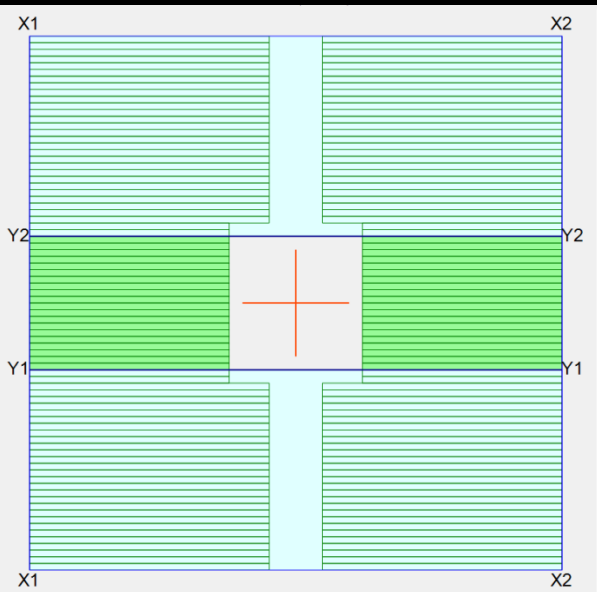

# Varian Millennium Collimator

# Elekta MLCi2

# Elekta Agility

# IQM Response Characteristics With Different Radiotherapy Beam

- IQM Intrinsic and effective spatial sensitivity
- Response as a function of field size
- Response as a function of beam energy
- IQM response as a function of dose rates

# Studied Linac Models

- TrueBeam (Varian Medical Systems, Palo Alto, CA)

- . Millennium MLC
- . 6 MV, 10 MV, 6 FFF, 10 FFF

- Clinac iX (Varian Medical Systems, Palo Alto, CA)

- . Millennium MLC
- . 6 MV, 18 MV

- Infinity ( Elekta AB, Stockholm, Sweden)

- . Agility Collimator
- . 6MV, 18 MV

- Infinity ( Elekta AB, Stockholm, Sweden)

- . MLCi2 Collimator
- . 6 MV, 18 MV

# Objectives

## ➤ IQM Intrinsic and effective spatial sensitivity

Response as a function of field size

Response as a function of beam energy

IQM response as a function of dose rates

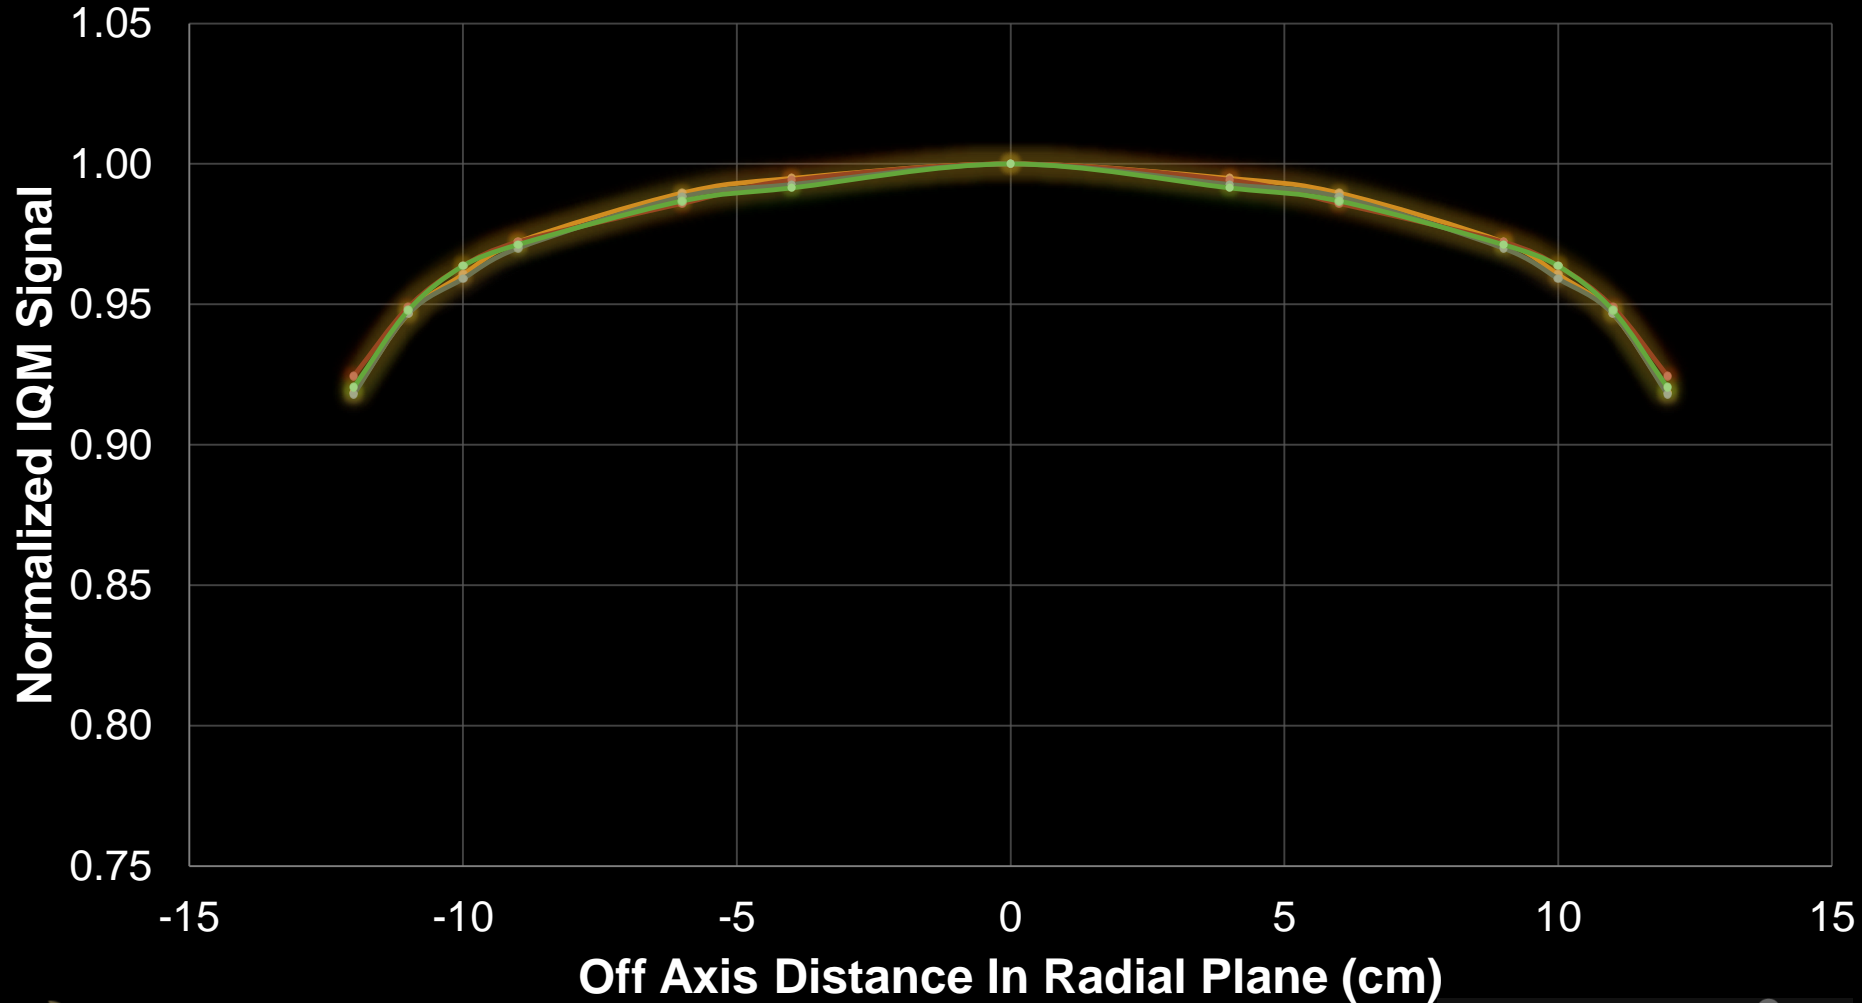

# IQM Intrinsic Response (Gradient Direction)

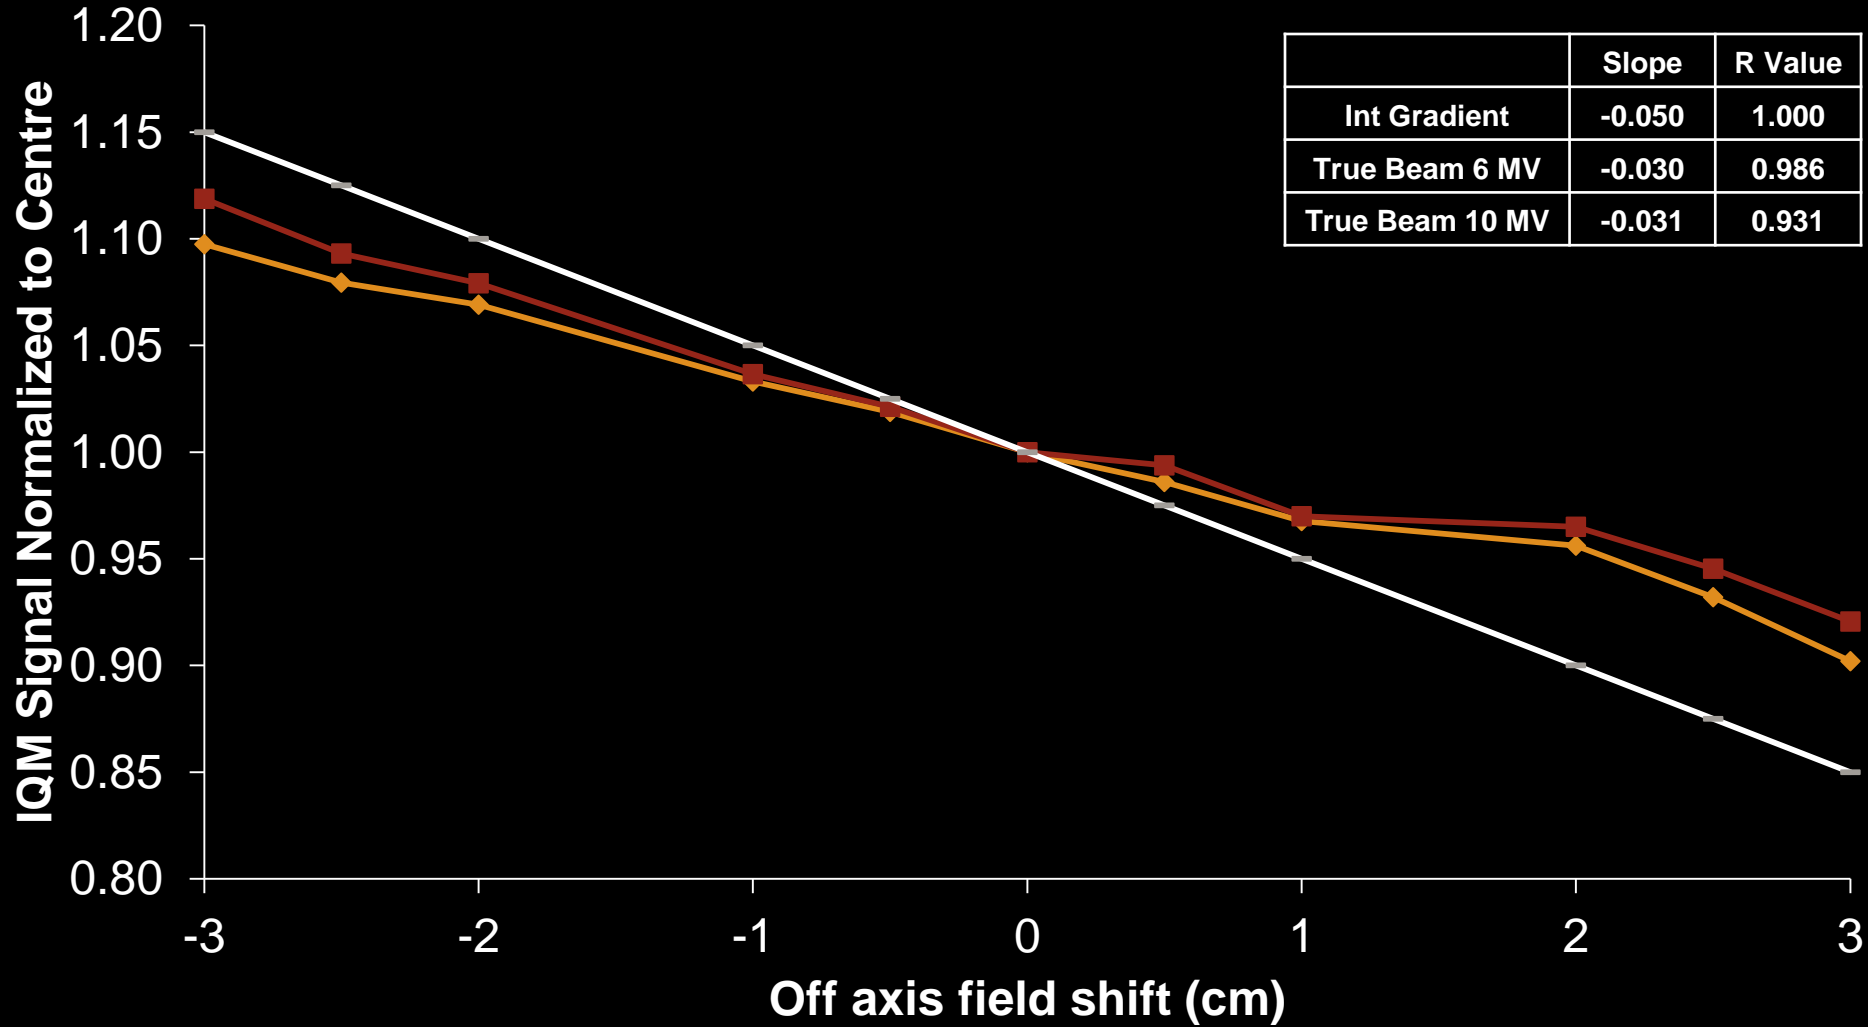

# IQM Intrinsic Response (None Gradient Direction)

—●— TB 6X    —●— TB 6 FFF    —●— 10 FFF    —●— 6X Agility

# Effective IQM Spatial Sensitivity for a 3X3 cm<sup>2</sup> field

◆ True Beam 6 MV    ■ True Beam 10 MV    — Int Gradient

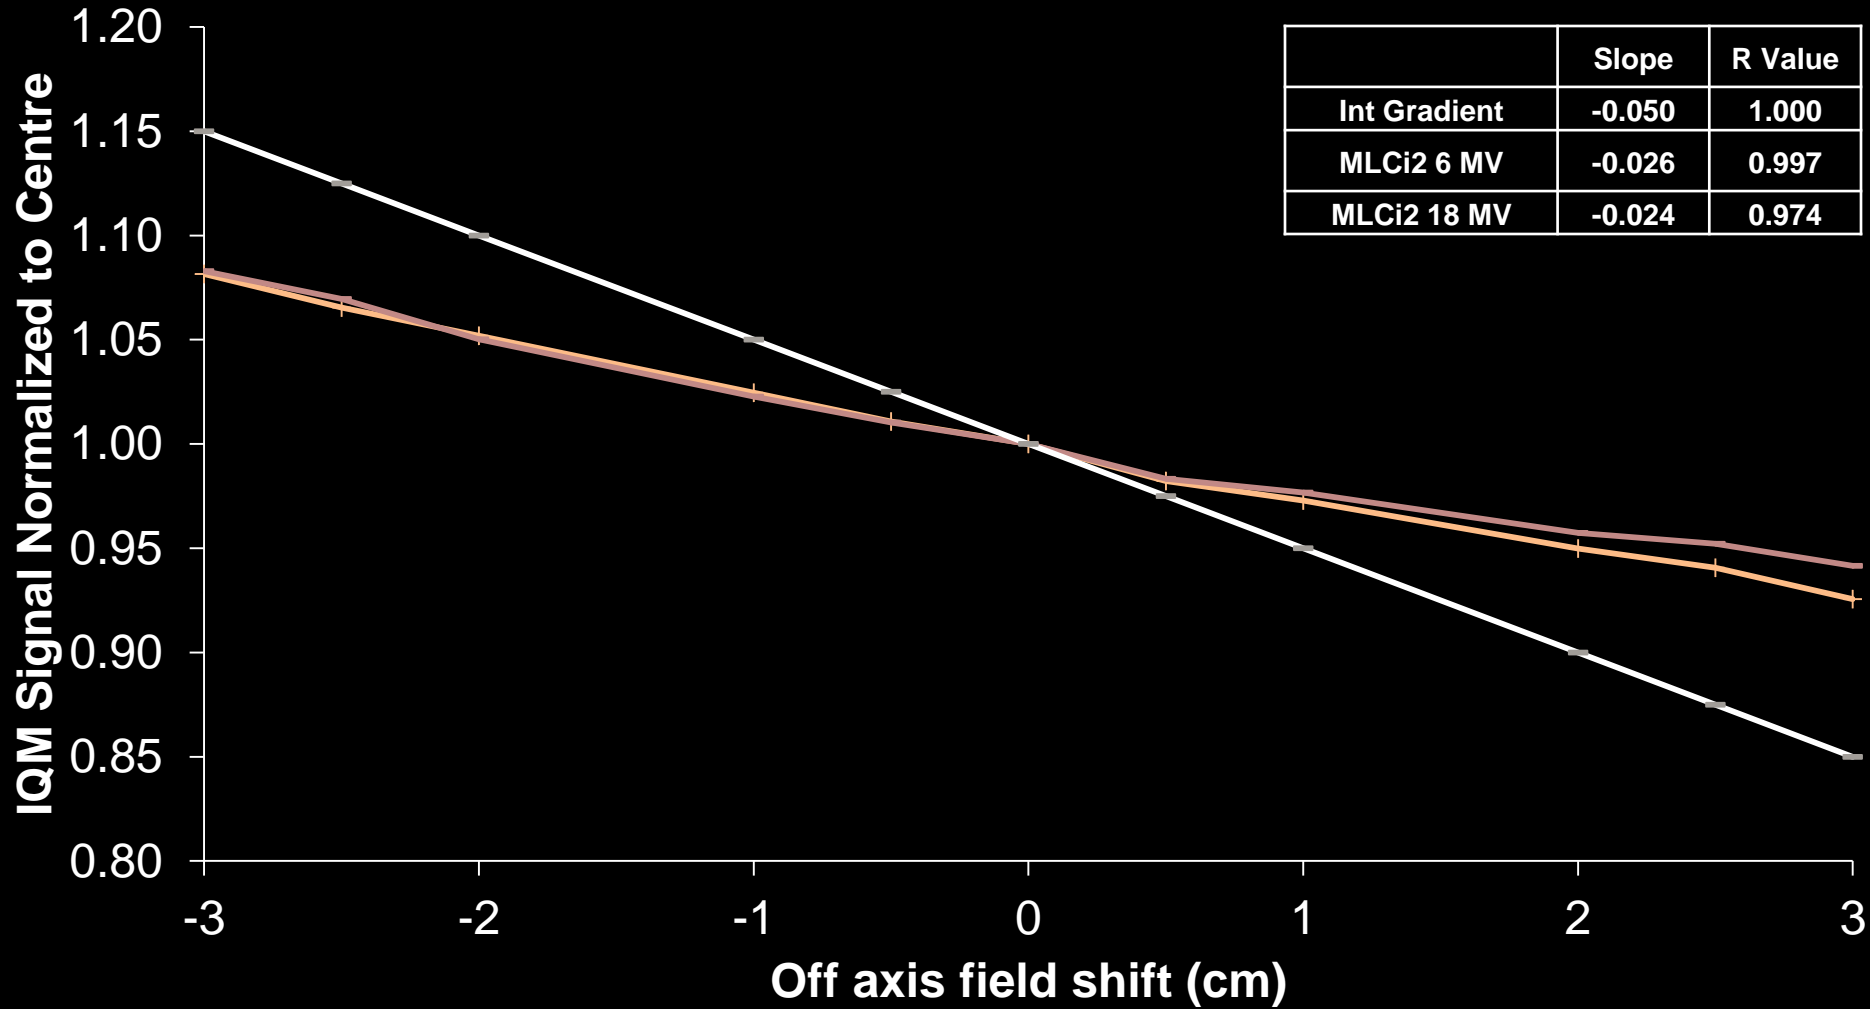

# Effective IQM Spatial Sensitivity for a 3X3 cm<sup>2</sup> field

— MLCi2 6 MV

— MLCi2 18 MV

— Int Gradient

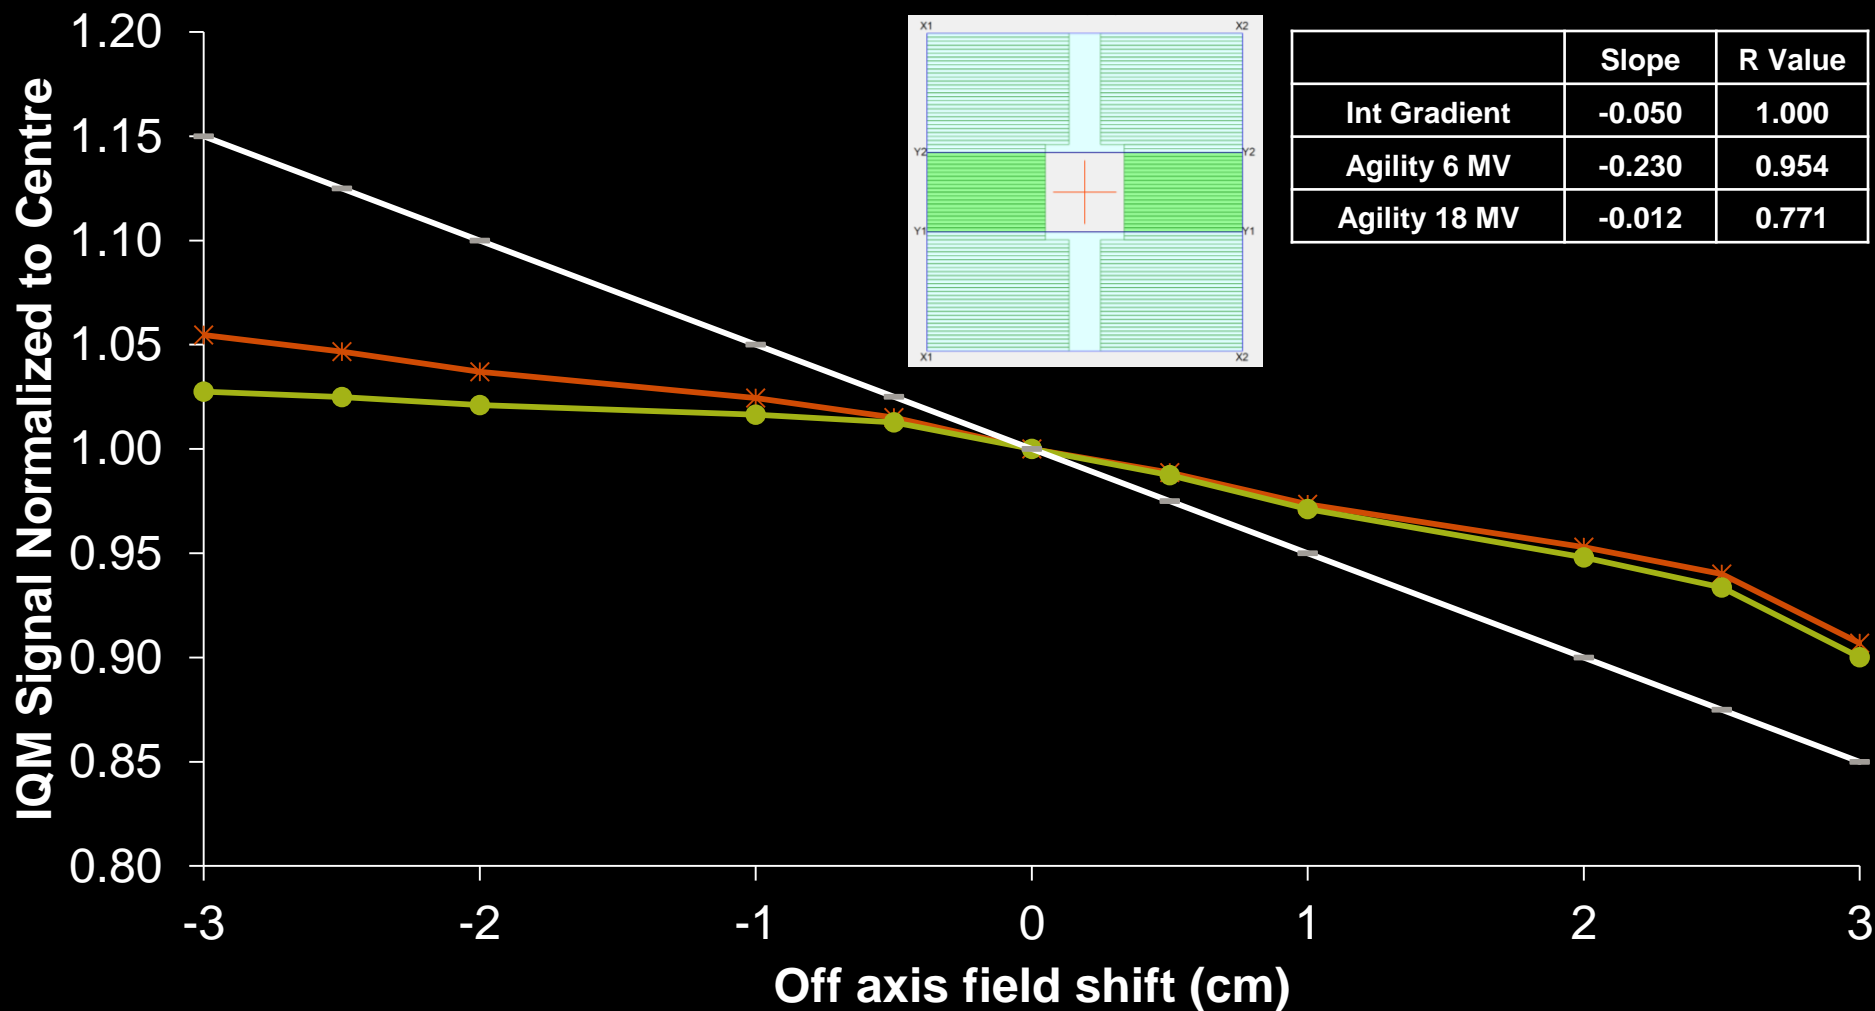

# Effective IQM Spatial Sensitivity for a 3X3 cm<sup>2</sup> field

✱ Agility 6 MV

● Agility 18 MV

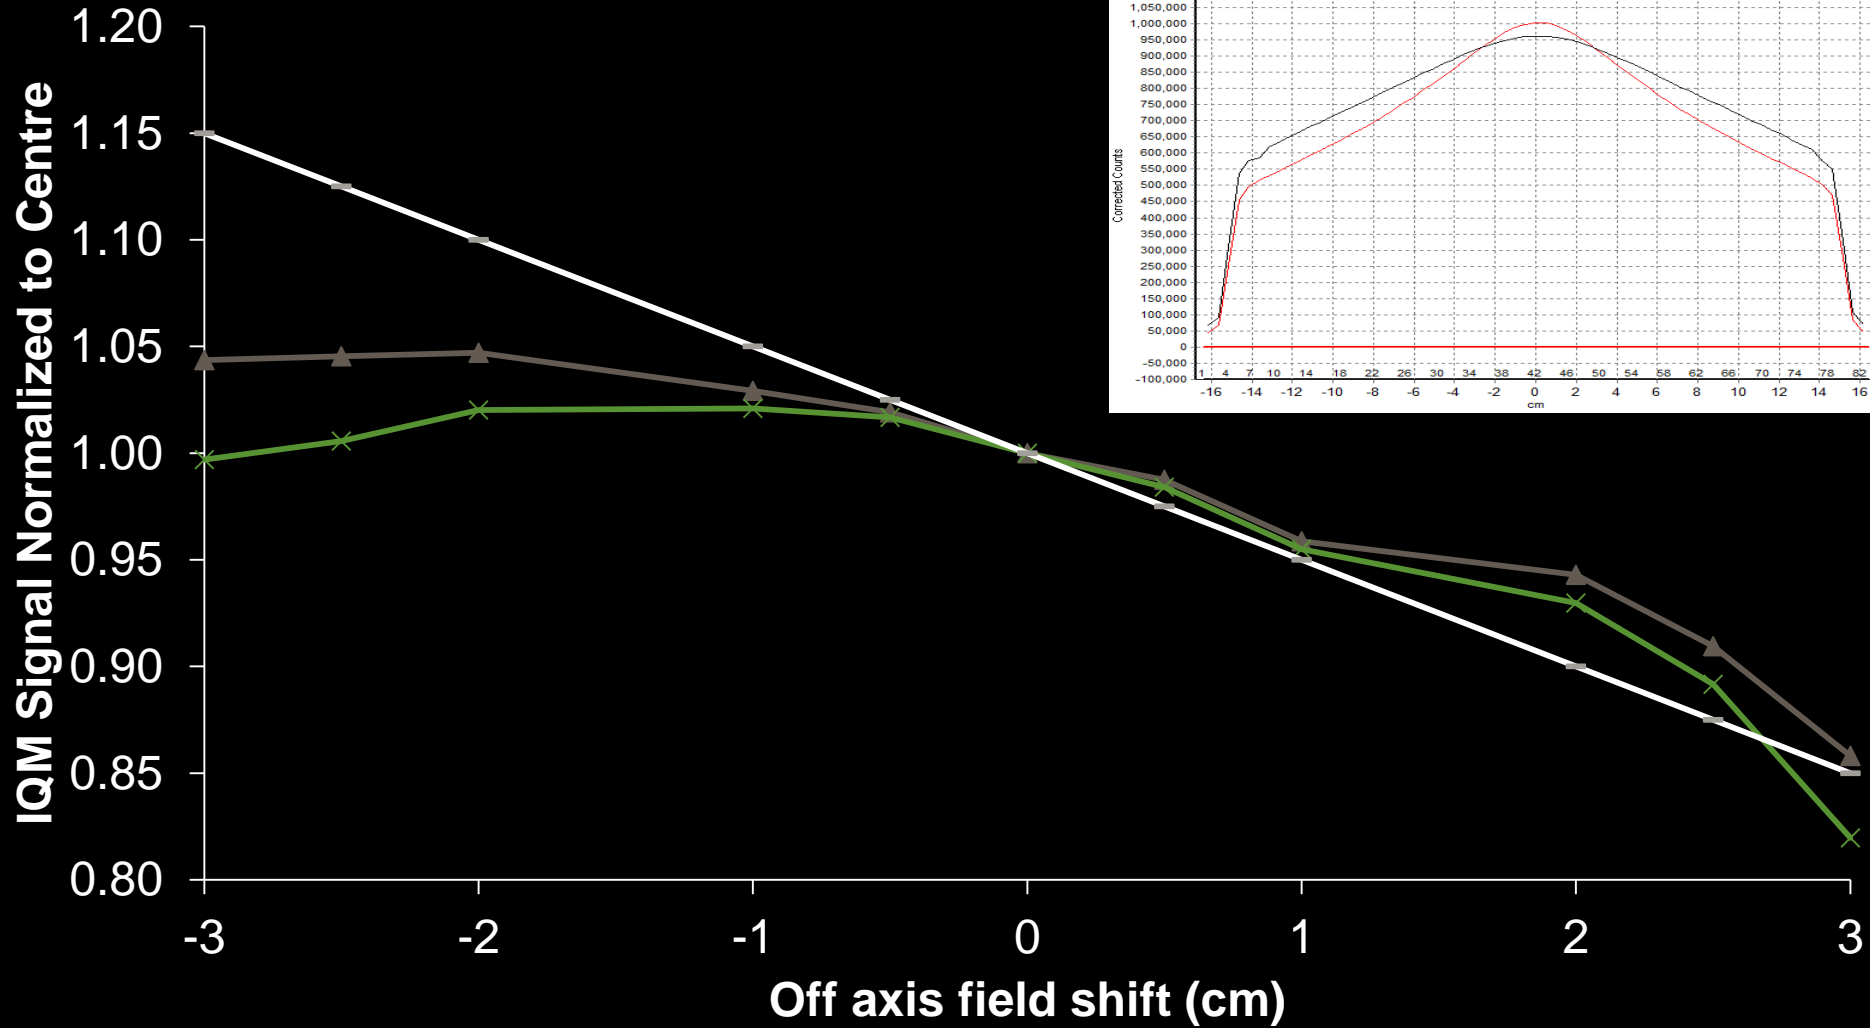

— Int Gradient

# Effective IQM Spatial Sensitivity for a 3X3 cm<sup>2</sup> field

▲ True Beam 6FFF    ✕ True Beam 10FFF    — Int Gradient

# IQM Response Characteristics

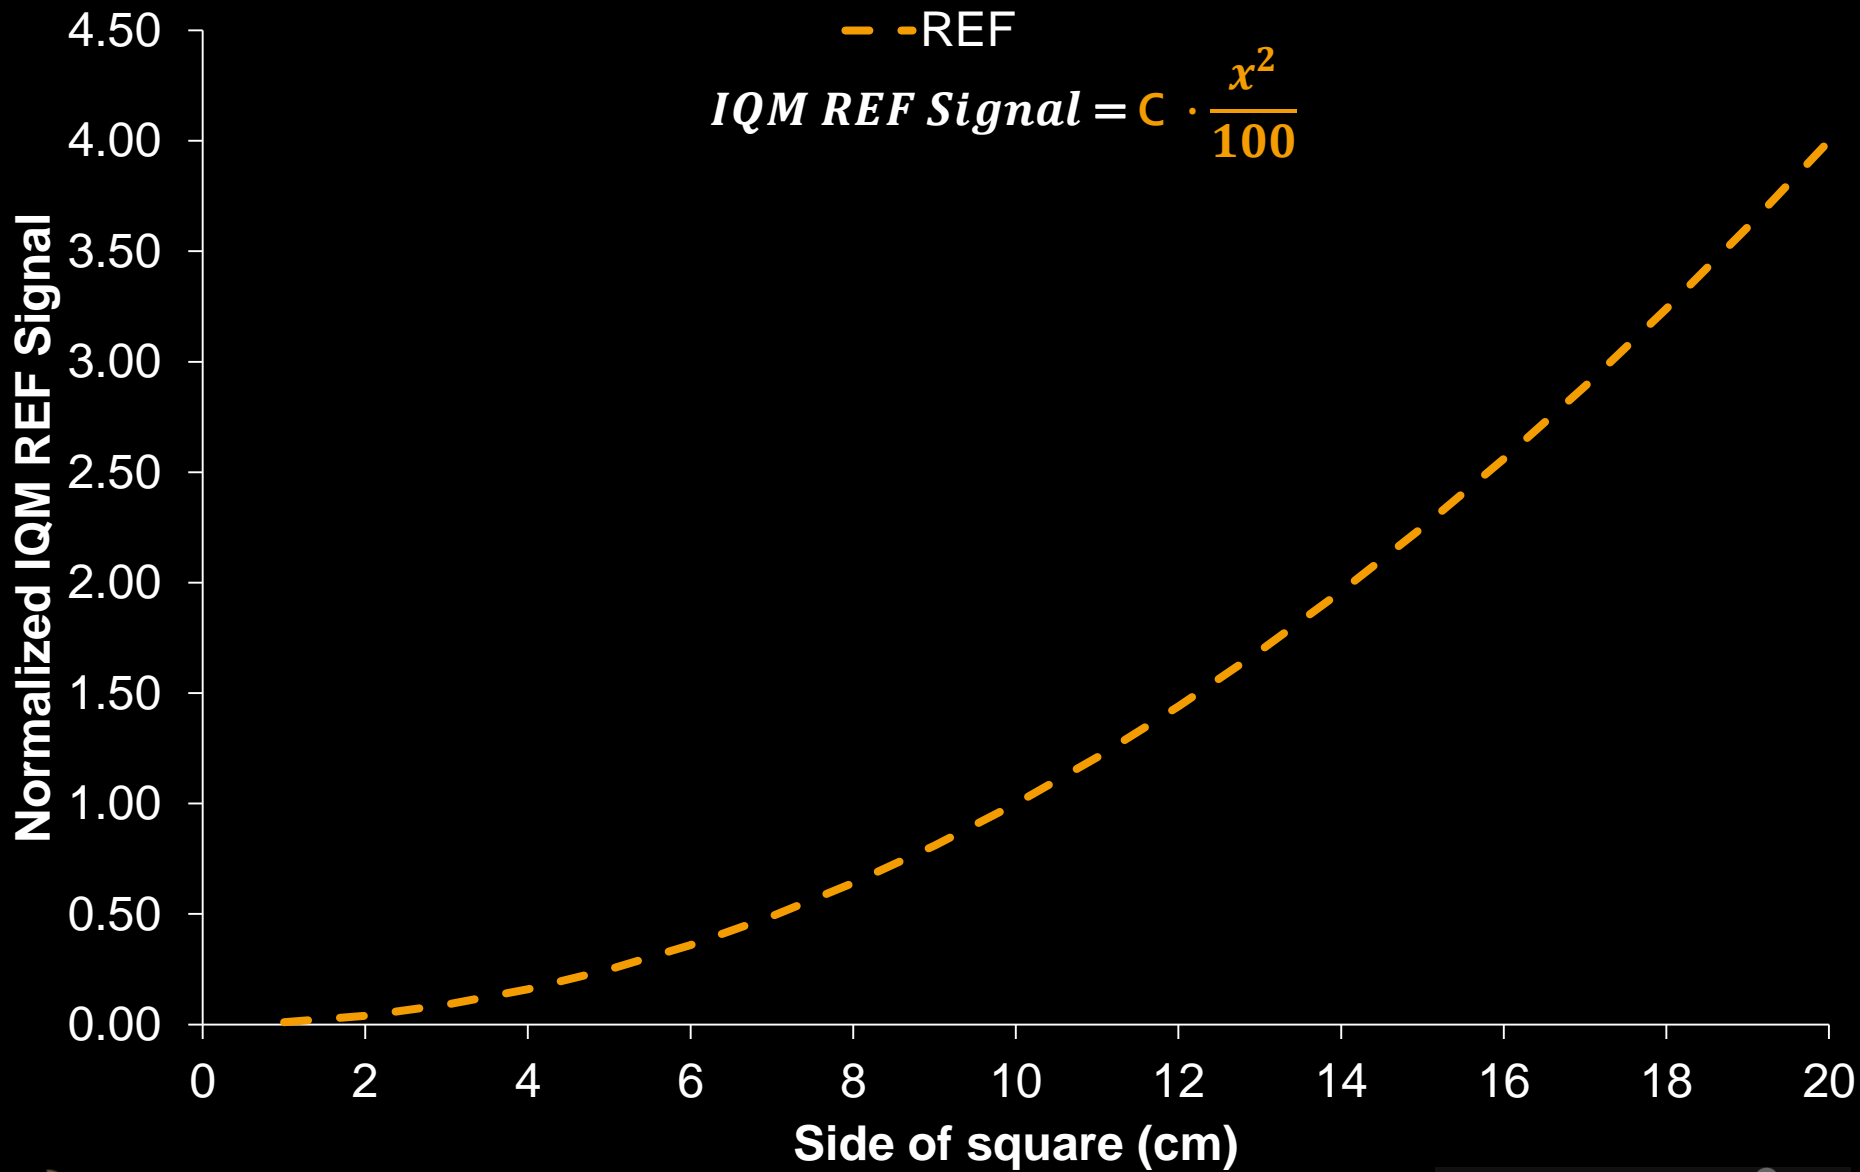

Intrinsic spatial sensitivity

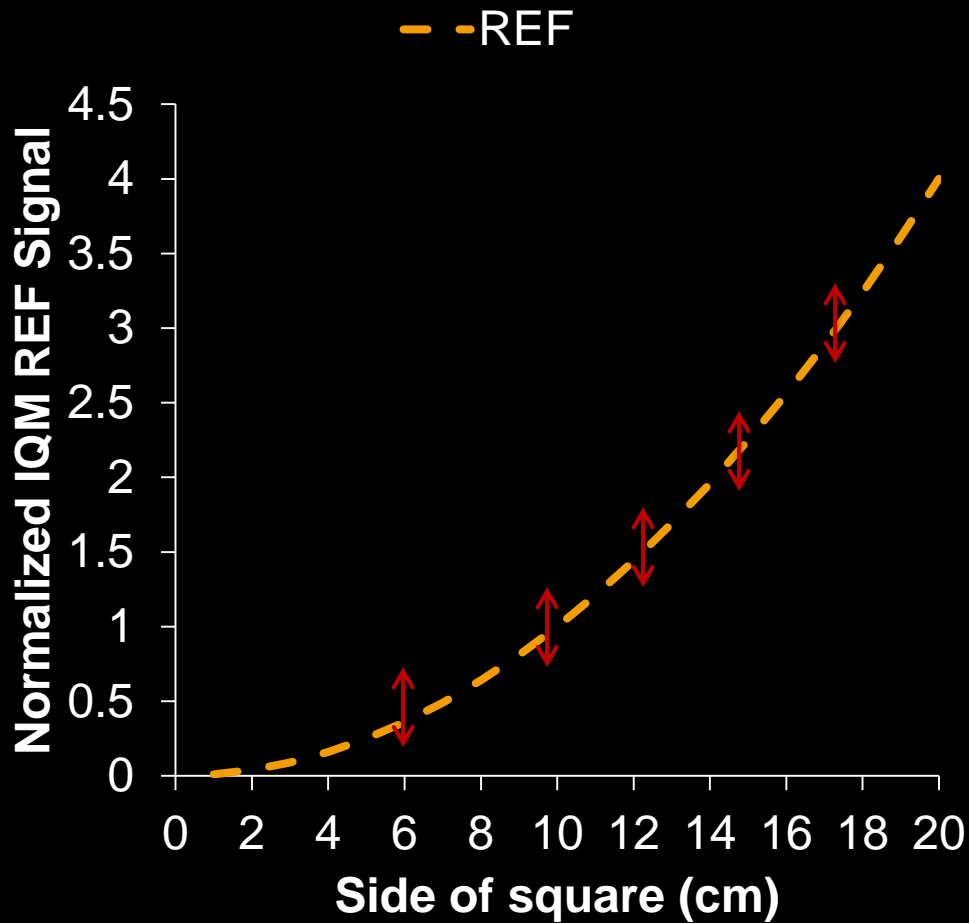

Effective IQM spatial sensitivity with different beams

➤ Response as a function of field size

Response as a function of beam energy

IQM response as a function of dose rates

➤ Deviations from REF caused by:

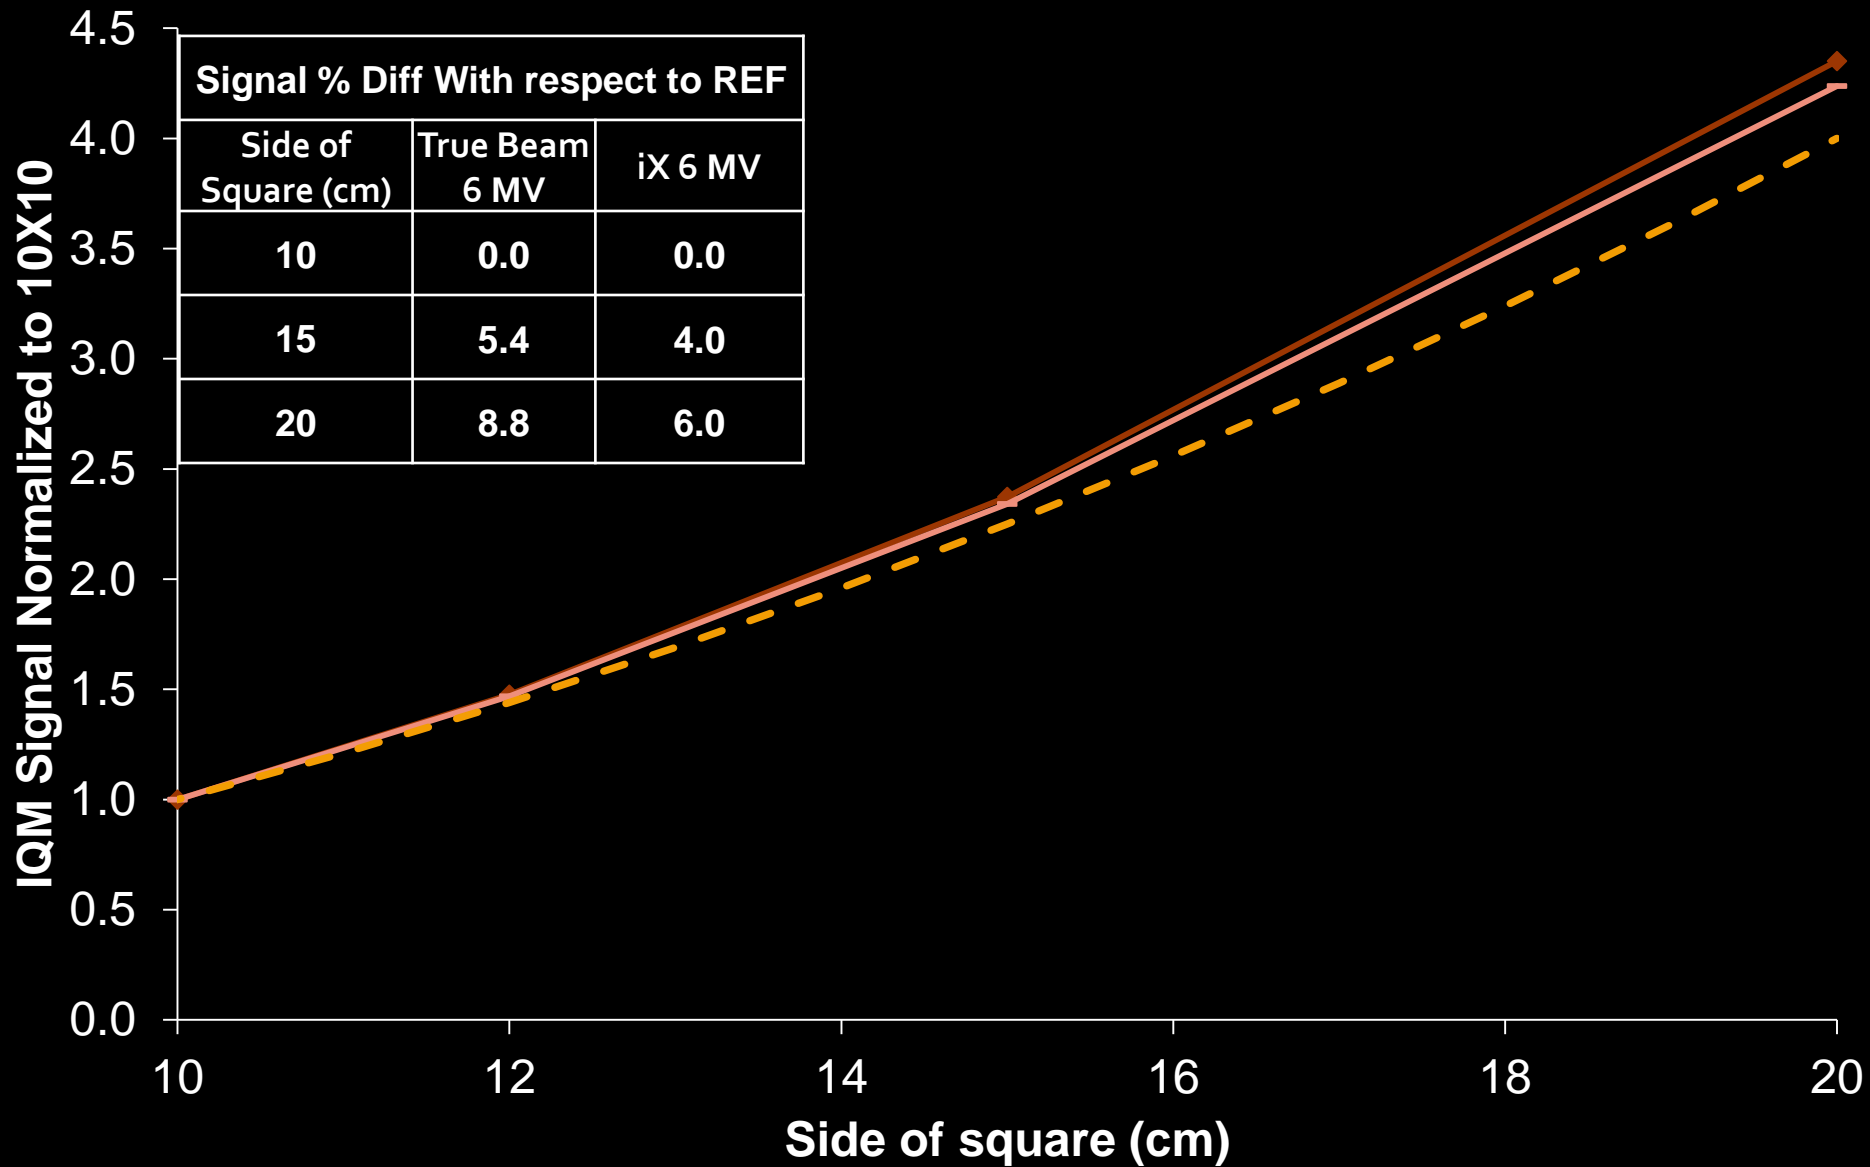

- Difference in LINAC output with field size
- Difference in beam flatness and symmetry
- Difference in beam transmission through collimating elements

— True Beam 6 MV    — iX 6 MV    - - REF

| Signal % Diff With respect to REF |                |         |
|-----------------------------------|----------------|---------|
| Side of Square (cm)               | True Beam 6 MV | iX 6 MV |
| 1                                 | -22.2          | -10.7   |
| 3                                 | -15.9          | -12.6   |
| 5                                 | -9.7           | -7.6    |
| 8                                 | -3.3           | -2.6    |
| 10                                | 0.0            | 0.0     |

— True Beam 6 MV    — iX 6 MV    - - REF

# IQM Response Characteristics

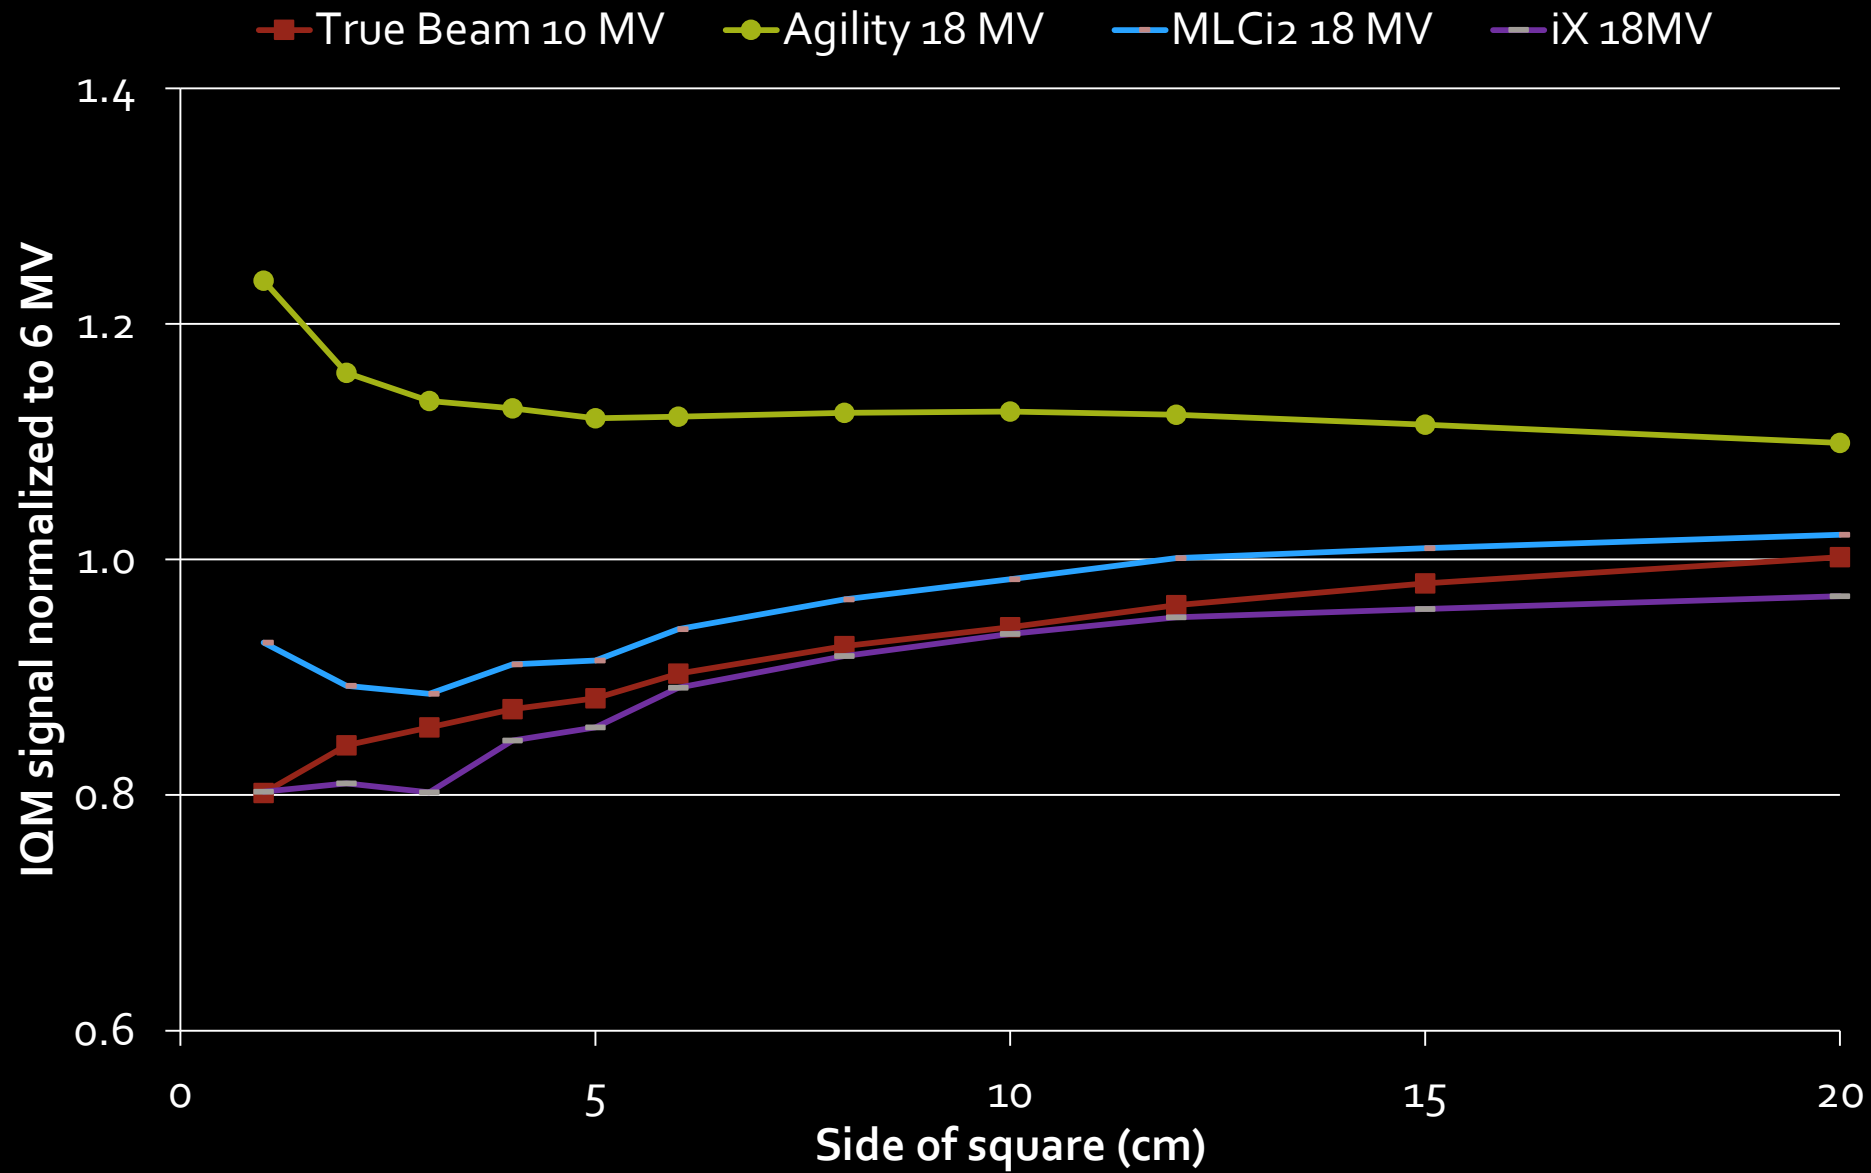

Intrinsic spatial sensitivity

Effective IQM spatial sensitivity with different beams

Response as a function of field size

➤ Response as a function of beam energy

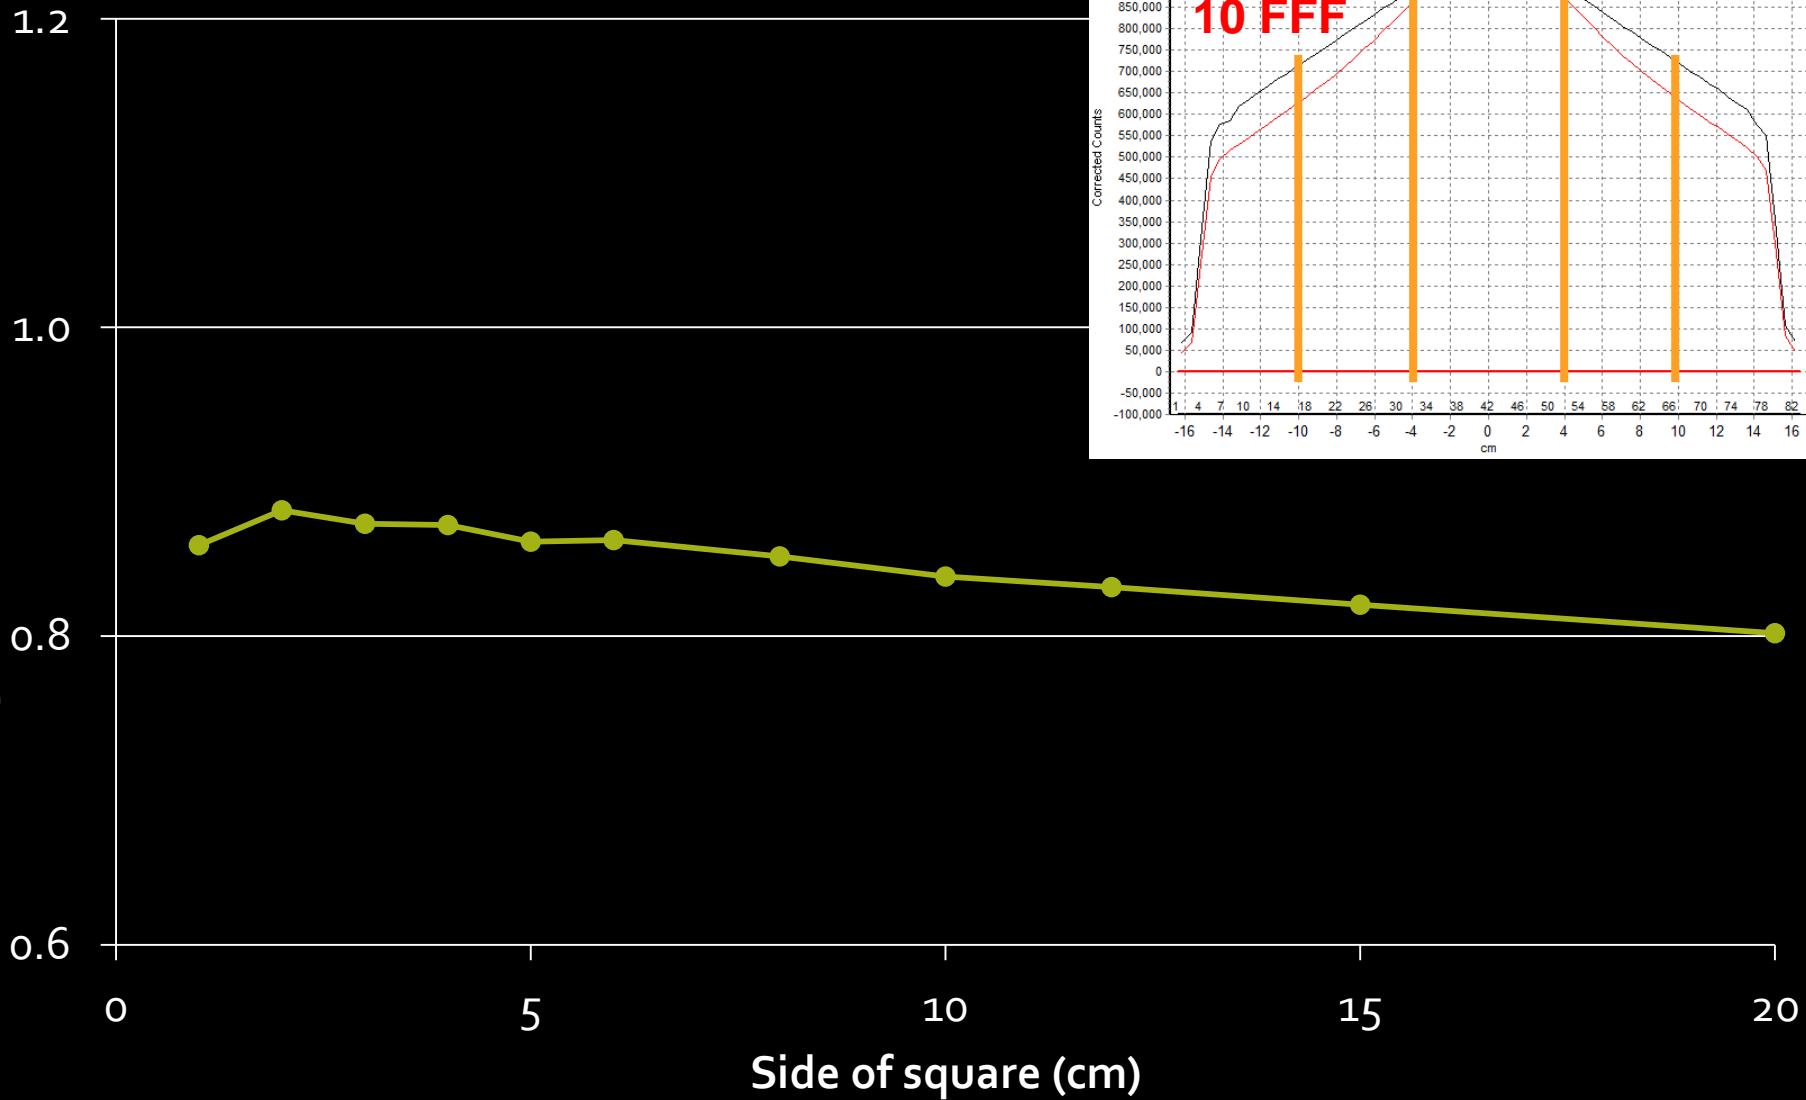

IQM response as a function of dose rates

IOM signal normalized to 6 MV FFF

● True Beam 10FFF

# IQM Response Characteristics

Intrinsic spatial sensitivity

Effective IQM spatial sensitivity with different beams

Response as a function of field size

Response as a function of beam energy

➤ IQM response as a function of dose rates

# IQM Dose Rate Dependency (Varian TB)

|                  | <b>Signal Normalized To 600 MU / Min For 6 MV ,10 MV, 6 FFF<br/>And Normalized to 800 MU / Min For 10 FFF</b> |                  |                  |                   |

# Summary

- Only minor deviations in IQM intrinsic spatial sensitivity was observed across different energies and platforms
- The effective spatial sensitivity is affected by beam profile parameters and beam attenuation
- The signal for square field size depends on the design of the LINAC head components
- The IQM energy discrimination varies with field size, design of the LINAC head components, and beam profile
- IQM system exhibits negligible dose rate dependency
